

D. C. WHITE & PARTNERS

### **Design and Manufacture of Bespoke Test Equipment**

A world leading manufacturer of renewable energy products needed a tensile fatigue test machine to test components used in their products. Though suppliers of fatigue test equipment had machines capable of the loads required they were both prohibitively expensive and a compromise on the client's requirements. D C White and Partners were called in to design and make a bespoke machine that would have an increased design life over that of their existing test equipment and not compromise on any of their testing requirements.

D C White and Partners were able to design, build and commission a bespoke solution that met all the client's needs at a quarter of the price of an 'off the shelf' solution.

Because of the success of our products and the consultancy work D C White and Partners do for the R&D department of our client, we have developed a relationship that has seen us supply them six bespoke pieces of test equipment, and have design input in 50% of the equipment used in their R&D facility.

If you are concerned that you are paying too much for equipment that never does quite what you would like it to do, please do not hesitate to contact us.
